

## Superior Load Securement ... At the Lowest Cost Per Truck

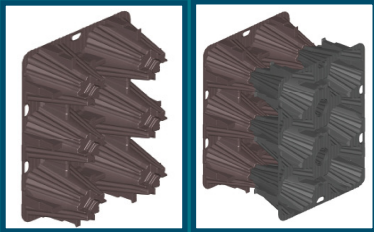

- Properly positions load over axles for DOT compliance at maximum truck weight (complies with CFR 21)
- Reusable HDPE lasts hundreds of shipments eliminating the high cost of disposable dunnage
- Lightweight, consistent components allow faster loading and securing of freight
- Reduced environmental impact by source reduction of disposable dunnage

### New technology saves money and time.

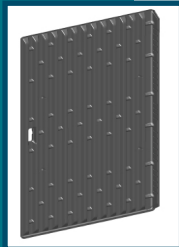

**SITUATION:** Many loads max out the weight limit of the trailer before the volume capacity, leaving empty space in the front of the trailer. The use of disposable dunnage to solve this problem is costly, time consuming, and inefficient.

**SOLUTION:** New **Paylode** reusable thermoplastic system is the last bulkhead spacer system you'll ever buy. Easy to use, **Paylode** ensures compliance with DOT regulations and will last 5-10 years. **Paylode** provides a complete range of components to optimize freight loading while filling voids and securing loads. The key to cost savings is reusable technology.

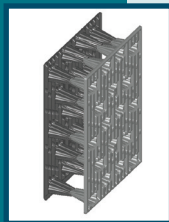

#### PAYLODE BULKHEAD SPACERS

- Durable HDPE is crush resistant up to 20,000 pounds
- Multiple Spacers can be snapped together to fill larger voids
- Light weight and ergonomic design for easy handling
- Slides into position with little effort

#### PAYLODE SEPARATOR PADS

- Buffers between Spacer and load or between two pallet loads
- Can be used separately or with Spacers
- Available in range of sizes
- Lightweight and ergonomic for easy handling

#### PAYLODE LATERAL VOID FILLER

- Interlocking dual panel efficiently fills voids between rows of products
- Panels snap together for wide spacing – or reversed for narrow spacing
- Available in range of sizes
- Easy to interlock, disassemble and nest

Reusable Dunnage. **The Right Way**
